

Mock Iteration V4

Final mock based on recommended improvements from Usability testing feedback (refer to wiki - Design process D). In effort to pass accessibility compliance we changed the color scheme to light blue, and amber from Material Design. Furthermore, we incorporated photography to show the use case of our application.

- Changed color scheme to color compliant theme
- Added photography to bring human connection, and use case into the homepage
- Layouts are spec to Google Material Design UI guidelines
- Mobile mocks created
- Data empty states created

About Antidote

Find over thousands of different drugs

Antidote seamlessly integrates the insurance and drug data consumers need to make an educated decision about medication usage. We combine trusted information from the Federal Drug Administration (FDA) and National Library of Medicine (NIH) and pair this with user-based experience of the drugs to provide a personalized approach to medical decision making.

More than just a website, Antidote is also an open source platform that provides a powerful API that transforms FDA and NIH data on drug and adverse effects information and couples user reviews in a clean, easy-to-use format. This well documented, organized API can be leveraged by other parties to further other development efforts.

Antidote is a prototype web application and platform created by Symplify Corporation in order to meet the requirements for submission to Request for Quotation (RFQ) 4QTFHS150004. This RFQ was issued by The General Services Administration (GSA) in order to establish a list of vendors as part of a blanket purchase agreement to supply agile delivery services.
